PERSONAL STATEMENT

I am a self-discipline person with strong ability of fast learning. I have conducted research related to computer vision, machine learning and image processing in medical image field, including segmentation, detection and classification. I am passionate about the application of artificial intelligence in biomedical field and dedicated to make contributions in healthcare.

EDUCATION

University of Chinese Academy of Science (UCAS)	Beijing, China
Shenzhen Institute of Advanced Technology (SIAT)	Shenzhen, China
M.Eng. in Computer Technology GPA: 3.78/4.0	Jun. 2019 – Jun. 2022
The first place in professional interview in Postgraduate Entrance Examination	2019
Hainan University (HNU)	Haikou, China
B.Eng. in Mechatronic Engineering GPA: 3.27/4.0 Ranking: 20/111	Sep. 2015 – Jun. 2019
HNU Outstanding Graduate	2019
HNU Elite Youth Training Program (3%)	Mar. 2017 – Jun. 2019

RESEARCH EXPERIENCES

- **Domain Distributions' Removal in Radiomic Features**, Independent May. 2021 – Present
SIAT-Medical AI Center, advisor: P.I. Zhicheng Li
 - Discrepancy across domain distributions (e.g., multicenter, scanner model, reconstruction settings) may greatly influence radiomic feature extraction and cause degradation in subsequent analysis. We have conducted experiments to use deep learning methods to fit mathematical relationships to improve the performance of traditional Combat (Empirical Bayes) algorithm in feature domain.
- **Patent Foramen Ovale Disease Classification**, Independent #[Video](#) #[Slide](#) Sep. 2019 – Apr. 2021
SIAT-Paul C. Lauterbur Biomedical Imaging center & Shenzhen University & Peking Tiantan Hospital, advisor: P.I. Yang Xiao and Prof. Yongjin Zhou
 - Preliminarily achieved an automatic diagnosis method in patent foramen ovale (PFO) classification in 2D contrast echocardiography videos, which firstly explored the feasibility of PFO diagnosis with artificial intelligence, revolved around interference and microbubble detection, and achieved 0.7750 accuracy, 0.7847 sensitivity and 0.7500 specificity compared to regular clinicians' 0.6800, 0.6200 and 0.8200.
 - Utilized CNNs (Deeplabv3+/Unet) to make 2D left atrium segmentation.
 - Proposed a time-domain preprocessing method to remove inherent interference (noise and motion artefacts) in echocardiography, which utilized conventional TTE imaging's prior knowledge and projected minimal gray interval from TTE videos to cTTE videos, thereby minimizing inherent interference as much as possible.
 - Developed a two-stage detection method in space domain, which includes a superpixel segmentation method and a radiomics method, coarsely aggregates the features of similar pixels into superpixel block and discriminate bubbles under the constraints of grayscale threshold and elliptic or circular circularity, and further finely makes radiomics feature extraction and selection.
- **Muscle Atrophy Disease Classification**, Participate Sep. 2020 – Apr. 2021
SIAT-Paul C. Lauterbur Biomedical Imaging Lab, advisor: P.I. Yang Xiao
 - Utilized 3D-ResNet to make binary classification in 2D shear-wave elastography videos, which fused B-mode and SWE (shear wave elasticity) images, realized the effective discrimination of muscle atrophy and achieved 0.9556 accuracy, 0.9557 sensitivity and 0.9554 specificity.
- **Other Projects Experiences**
 - Huawei Cloud Cup Precipitation Nowcasting May. - Jun. 2020
Enhanced the performance of convGRU through introducing GAN module to make prediction of future precipitation in radar data.
 - User Cellphone Traffic Upgrade Prediction Oct. - Nov. 2019
Preprocessed and analyzed text data, practiced feature engineering, utilized basic machine learning models to make traffic upgrade classification.
 - Quantitative Analysis of Contrast-Enhanced Ultrasound of Osteonecrosis of Femoral Head Jun. - Aug. 2019
Preprocessed ultrasound videos, utilized VGG16 to make segmentation and extracted features of ROIs to plot Time-Intensity Curve to analyze curve parameters.
 - Sliding Double-deck Parking Space #[Video](#) 2017. Sep - Jan. 2018

Designed a sliding mechanical transmission control system in car parking area, which can semi-automatically park, lift and rotate, and participated in the physical production, test and calibration.

Selected Awards

National inspirational scholarship	2017
HNU merit student and excellent student leader	2016, 2017
HNU second-class scholarship	2016
Chinese Academy of Sciences Public Science Day's outstanding volunteer	2021
National top 100 summer social practice team and outstanding individual	2018
Haikou International Marathon Competition's outstanding volunteer	2017

LEARNING EXPERIENCES

- **Convolutional Neural Networks for Visual Recognition** (CS231n), Stanford University, Online [#Code on github](#)
- **Statistical Data Analysis**, Johns Hopkins University, Coursera [#Code and certificate on github](#)
- **Artificial Intelligence in Healthcare** (CS271), Stanford University, Online

SKILLS

Standardized tests: IELTS 6.5 in Sep. 2021

Programming skills:

Proficient in Python, R, Matlab and C
Experiences with LaTeX, Javascript and HTML
Technical Linux, Pytorch, Tensorflow and Keras

Software skills:

Proficient in AutoCAD, Pro/E, Adobe Photoshop, Premiere, Illustrator and AfterEffects

Language: Chinese (native), English

Extracurriculum: [#More details](#)
